

FOR IMMEDIATE RELEASE

Sunex Launches World's Smallest Fisheye Lens

Las Vegas, March 31st 2009 - Sunex, Inc. is pleased to announce the launch of the world's smallest fisheye lens. The DSL216 features a 187° field of view (FOV), high resolution and very compact size. The new miniature lens offers an unmatched combination of image quality, size and durability.

The DSL216 is optimized for sensors with multi-megapixel resolution. On popular 1/4" format sensors, this Superfisheye lens offers a 187° horizontal FOV. When used with larger format sensors it will provide a full circular image with a maximum FOV of 187°. The relative aperture of F/2.0 makes the lens suitable for low-light camera applications. The DSL216 also features a small form factor of about 16mm maximum diameter and a total track of about 18mm. The lens barrel is threaded M12x0.5 (s-mount) to fit most standard, board-level mounts. The standard lens is provided with an integrated IR cut-off coating. For near-IR applications, lenses without the IR cut-off coating are also available. In addition, the lens

assembly features a sealed first element for protection from the ingress of dust and water. "The special features designed to increase the durability combined with large FOV and compact size make the DSL216 lens ideal for demanding automotive, security and other outdoor applications" says Peter Hark, Automotive Sales Manager at Sunex.

The new DSL216 is in production and samples can be purchased online at www.optics-online.com.

About Sunex:

Sunex Inc. is a world leading manufacturer of CMOS and CCD lenses for challenging and demanding applications for the automotive, security, visual communication, industrial and medical markets. Sunex also specializes in high volume standard and custom lens solutions designed to customer requirements. The Company is headquartered in Carlsbad, CA, USA with manufacturing in Shanghai, China.
